

FieldView^{plus}

ALL YOUR INFORMATION. ANYTIME. EVERYWHERE.

You make critical decisions all the time. Decisions that affect your yield, your operation, your livelihood. Decisions that hinge on information you may not have when you need it. FieldView Plus gives you that information anytime, everywhere. You can make the best decisions possible. And it's simple to use.

The Plus in FieldView[®] Plus

Take everything you love about FieldView and its snapshot of what happened in the cab. Add the ability to tap into that information at will, share it, compare it, amplify it. That's the Plus, and it's a big one.

FieldView Plus operates in the cloud. It's a secure, remote repository for all your information: maps, yield comparisons, test results, everything you need to see the results of past decisions. Everything you need to make the right decisions for the future.

On the move, at your fingertips

You can easily upload and download everything. Use your information wherever you and your iPad[®] tablet go. File transfers, different types of maps, shape files: all there. FieldScripts[®], boundary files, config files: all there. Access for others who need to know: it's there. Automated, real-time reports on what's happening in the tractor or combine when you're not: right there. Synchronization among multiple iPads in multiple machines: yes, there. Not there: USB hassles or worries about lost data.

Plus the FieldView website

You also gain access to a customized FieldView website, where you can generate operation-wide planting and harvest reports; establish performance metrics by field, planter, combine and hybrid; and simplify client/farm/field management by adding, editing and merging fields.

You don't have to be a tech wizard to make the most of it. Turn this sheet over to see how simply it works. Better yet, have your Precision Planting Premier Dealer show you.

Precision
PLANTING[®]

MAKE INFORMATION, DECISION-MAKING AND BIGGER YIELDS SIMPLE.

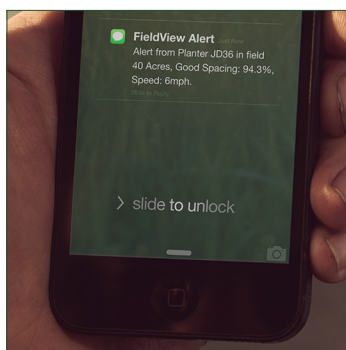

Simple Management

Now you can see people, fields and pins on a map of your entire operation – even get text and email alerts in real time. And the FieldView website delivers key metrics and operation-wide reports by field, planter and hybrid. You can even see tile, fertility, yield and other maps at the same time. It makes it easy to compare, refine, improve – and make more.

Simple Support

FieldView Plus makes equipment health information (not your field map files) available to your dealer and our product support team, so they can deliver more thorough and sufficient support. We'll be there for you to help you realize all the potential of FieldView Plus.

FieldView^{plus}

Simple Security and Backup

Back up all your 2Q/2Q and FieldView data automatically and securely. Think of it as an ultra-safe vault for all your valuable data – to which you hold the key.

Simple Syncing

More than one person working at the same time? Now you can all have the information. FieldView Plus automatically syncs field pins (including notes and photos), client farm field lists and field map data so you know you have the same information wherever you are.

Simple Sharing and Reporting

FieldView Plus lets you easily transfer and share files (FieldScripts, prescriptions and boundaries) from the cloud to the SeedSense® display. And you can effortlessly download 2Q/2Q files to your desktop or share them with consultants, partners, landowners, insurers and others. It's faster and easier than USB file transfers, and it will integrate your operation at a previously unimaginable level.

Built-in simplicity is what makes the power of FieldView Plus so useful and profitable to you.
