

Algaecide

TREATMENT FOR KILLING FLOATING, SUBMERGED AND PLANKTONIC ALGAE IN PONDS/LAKES

Late Spring application.

Algae forming on the bottom of pond & water temp above 60 degrees.

30 day residual suspension using Stabitol technology to aid in control of Algae.

Instructions

1 Gallon + 9 gallons of water/acre will contact kill algae
DO NOT treat more than 1/4 – 1/3 of the surface area of pond at one time to avoid Oxygen depletion due to vegetation death. Wait 7 – 10 days between treatments. Re-treatment during season will be needed. Treat when algae is in early stages.

100% safe water use immediately.

Do not use in Koi or Trout ponds – Toxicity is directly related to water softness.

*Add Pond₂O Surf to enhance kill on older algal mats
