

## **BioBlocks**

### **NATURAL MUCK AND SLUDGE REMOVAL FOR SPECIFIC AREAS IN PONDS AND LAKES**

Docks, swimming areas, retention ponds and lagoons.  
Late Spring treatment – Water temperature above 60  
degrees March – October.

#### **Instructions**

Evenly disperse 4# (13ct) blocks over a 2000 square foot  
area.

Blocks will sink into muck layer when dropped into water  
from surface. Blocks can be manually placed into muck  
layer to insure placement.

Super concentrated Bio Enzyme Spores release billions of  
enzymes and micronutrients into the sludge layer. This  
combo ensures rapid stimulation of biological activity and  
reduction of sludge layer.
