

COVER CROPS – One of the Keys to Healthy Soil

Since the resurgence of cover crops in the last 15 years, there has been a lot of research done by universities, companies, and individual farmers. Through this plot and on-farm research we know that cover crops are an important part of the modern farming system. Healthy soil equals healthy plants. Cover crops can help get you there.

But, apart from increased soil health and productivity, there are other factors driving the farming industry to look closely at cover crops and other conservation practices. The American consumer. More and more, people and therefore major food companies, are looking at sustainable farming practices.

Earlybird promotes sound farming practices, good agronomics, and quality products to ensure our farmers are productive and profitable. Earlybird offers top quality cover crop seeds for a variety of applications.

If you want to reduce erosion, suppress weeds, increase water holding capacity, improve soil structure, and enhance soil biology, let Earlybird help you implement a cover crop strategy on your farm.
