

# EB HayPro Grass Mix

## FORMULATION

- 38% Devour Orchardgrass
- 32% Tetra Sweet Perennial Ryegrass
- 15% Macbeth Meadow Brome
- 15% Climax Timothy

## EB HAYPRO GRASS MIX FEATURES

- Plant type: Perennial Mix
- Planting dates: late March-early May, Aug-Sept
- Soil pH: 6.0-7.0
- Soil adaption: Wide
- Planting depth: 1/8"-1/4"
- Approximate seeds/lb: 107,000
- Seeding rate drilled: 25-30 lbs/A
- Seeding rate broadcast: 35-40 lbs/A
- Interseeding with drill: 10-12 lbs/A
- Days to germination: 7-14
- Main usage: Pasture, baling
- Height at maturity: 3'-4'
- Length of stand: Permanent if managed well
- Reproduces by: Seed

- **DEVOUR ORCHARDGRASS**
- Devour works well in both a hay and grazing situation. It has excellent seedling vigor and establishes quickly. Devour is very high yielding and late maturing, with good forage quality.

- **TETRASWEET PERENNIAL RYEGRASS**
- TetraSweet is a rapidly growing, high energy tetraploid perennial ryegrass with excellent digestibility. This late maturing variety exhibits excellent disease resistance, profuse tillering, and season long yield.

- **MACBETH MEADOW BROME**
- MacBeth is a soft leaf, high yielding, very palatable addition to this hay mix. It boasts top yields and strong regrowth, topping several university trials.

**EB HayPro Grass Mix only available through Earlybird Feed & Fertilizer!**
