

## 19-0-0 Fertilizer with 100% Regain

Contains .125% Dimension™ for crabgrass control.

- Dimension™ provides pre-emergent and post-emergent control of crabgrasses, weedy grasses, and broadleaf weeds early in their growth cycle.
- Regain, powered by NutriSphere-N®, is a stabilized nitrogen additive available in Spring Valley professional fertilizers. Regain provides the most advanced, continuous protection and stabilization of applied nitrogen, insuring a turf manager's fertilizer investment against wasteful nitrogen loss. Delivering the nutrient benefits at lower application rates, Regain products can decrease fertilizer costs over similar areas of application.
- No stress—steady growth
- Do not plant new seed for 10-12 weeks
- Apply at 4# per 1,000 square feet of lawn

A 50lb. bag treats 12,500 square feet on turfgrass.

A 20 lb. bag treats 5,000 square feet on turfgrass.

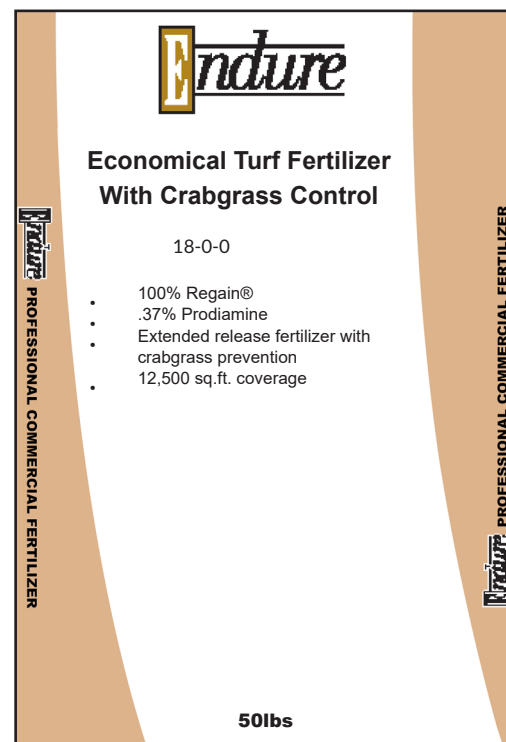

\*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Turfgrass needs fed every six to eight weeks during the growing season.

\*All phosphates have been removed from the Endure maintenance products keeping our environmental concerns in mind. Newly seeded turf should be fertilized with Endure 10-20-8 Starter Plus Earth-Friendly Organics at the time of planting. 10-20-8 Starter Plus can be used anytime a soil test result recommends additional phosphate to improve soil conditions.

## 18-0-0 Fertilizer with 100% Regain® Coated Nitrogen Contains .37% Prodiamine® Crabgrass Control

- Prodiamine provides pre-emergent control of crabgrasses and other annual grasses
- Regain® keeps more nitrogen where the turf can use it
- Reduces stress from nitrogen leaching and volatile denitrification
- Economical spring treatment to control crabgrass and green up turf while not promoting excess turf growth

A 50lb. bag treats 12,500 square feet on turfgrass.

\*Do not plant grass seed for six to eight weeks following application.
