Introducing the foal to milk

Tips on Feeding the Orphan or Rejected Foal

- Get the Foals First® Milk Replacer Powder
- From Birth to 2 Months of Age
- Easy to Mix
- Mimic Mother Nature

Packaging: 50 lb Paper Bags and 10 lb buckets

Progressive Nutrition’s FOALS FIRST® - Milk Replacer Powder is a highly digestible foal milk replacer for orphan or rejected foals. It contains the highest quality milk ingredients, vitamins and minerals for healthy growth and development. FOALS FIRST® - Milk Replacer Powder is mixed with water in a bucket and fed free choice. FOALS FIRST® - Milk Replacer Powder may be fed to orphan foals on day 1 and should be fed until they are 60 days old (2 months).

Get the Foals First® Milk Replacer Advantage:

- Free-choice bucket feeding, on demand, makes raising an orphan very easy
- Nutritionally balanced and fortified to meet the high nutrient demands of the young growing foal
- Contains ‘all milk ingredients’ for easy digestion
- Slightly acidified to help reduce the risk of over-consumption
- Easy to mix and feed
- Provide at room temperature for convenience

Tips on Feeding the Orphan or Rejected Foal

- Provide the colostrum to the orphan or rejected foal before offering the milk powder in solution
- It is best to provide Foals First® Milk Replacer powder in solution, in a bucket at shoulder height for the foal to drink
- If a nipple is used to get the foal to drink the colostrum and begin to drink the milk replacer, make sure the opening is at least ½” wide to assure adequate flow
- Never force the foal’s head into a bucket
- The bucket should be a contrasting color to the wall to make it easy for the foal to find

Introducing the foal to milk

- Initially, on day one, warm milk slightly to encourage consumption
- Using a shallow plastic bowl, raise the bowl to the foal’s muzzle while they are sucking your finger
- Slowly remove your finger after they begin to drink
- Repeat until the foal is drinking from the bowl on their own
- Once the foal learns to drink from the bowl, put the milk into a small bucket and hang it securely on the wall at their shoulder.
- From this point forward mix powder with ambient temperature (cool) water to limit over consumption
- On Day 1 start with 1/2 of the desired daily consumption rate split into 2 Equal feedings (AM and PM)
  - Increase amount of milk by 1/2 gallon each day until desired intake amount is reached
  - If foals is still hungry, offer Foals First® Starter & Creep pellets in separate feeder.

Daily Feed Directions

- Always split the total daily feeding amount into 2 separate feedings, morning and evening
- To estimate how much milk the foal should consume each day, refer to the chart below. Example: a foal that will mature at 1,000 lbs will need 4 gallons of milk each day.

Mixing Directions:
Always use the plastic measuring cup enclosed in the bucket or bag
