100% nutritionally complete for omnivorous fish and was developed by professional nutritionists and fish experts. Formulated as an easily-digestible, high-energy, nutrient-dense diet with an excellent conversion rate, Pond Fish 4000 has superior feed efficiency and supplements your pond's natural food source. AquaMax® Pond Fish 4000 is a floating product in a in a 3/16" extruded pellet.

Features & Benefits

100% nutritionally complete

Complete, balanced diet for omnivorous fish

3/16" particle size

Suitable size for many species of pond fish

36% Protein, 6% Fat

High protein to support muscle growth, but not the excessive fat of salmonid diets

Few feed fines

Little waste and optimal feed conversion

Floating diet

Easy to manage and designed to address overfeeding

High digestibility

Significant nutrient absorption means cleaner water

Highly palatable

Helps to ensure proper consumption

Nutrients

Nutrient	Min / Max	Amount
Crude Protein	MIN	36 %
Crude Fat	MIN	6 %
Crude Fiber	MAX	5 %
Crude Fiber Max	MAX	5 %

Feeding Directions

Description

This category of fish includes those that feed on both animal and vegetable substances, so they don't demand the higher
protein levels or nutrient densities required by carnivores. See feeding strategies for feeding directions on specific species.

Fish include: catfish and tilapia.

Caution

Store in a dry, well-ventilated area protected from rodents and insects. Do not feed moldy or insect-infested feed to animals as it may cause illness, performance loss or death.

Management Practices

Consumption can vary depending upon water temperature, season of the year, nutritional needs of the fish, availability of other foods and fish familiarity with particle feeds. Consult the feed tag on this package for specific feeding directions.

A feeding program is only as effective as the management practices followed. Actual results may vary depending upon feed intake, environmental conditions and the quality of management practices. An effective feeding maximizes feed conversion rates which helps minimize the risk of water quality degradation. However, it is necessary to follow

good management practices and feed ONLY what the fish will consume. Excess feed increases the Biochemical Oxygen Demand (BOD) which over time, can contribute to the deterioration of your water quality. Adequate Dissolved Oxygen (D.O.) must be maintained for sport fishing ponds; aggressive feeding should be accompanied by an adequate aeration program.
